

## Operator Environment

### Customizable Display

MTA's Leonardo is an off-the-shelf display whose software can be easily customized by the customer according to the specific needs of the off-highway machines into which it is installed.

- Can be used as stand-alone device in which it also acts as a dashboard
- Can also be incorporated in an electronic system that includes other displays or dashboards
- Software can be customized using Android Studio, a software environment that is aimed at the

most expert programmers and allows customers to develop complex, refined graphics

- Can be programmed by OEMs using MTA Studio, another easy-to-use software tool that is ideal when the application does not require elaborate graphics
- Features large 12.1 in. (30.5 cm) TFT color touchscreen with resolution of 1280 x 800 pixels
- Multitouch screen (up to 10 points) with latest generation touch controller
- Large size, high resolution and high luminous intensity provide high visibility, even with intense direct light
- Includes anti-glare and anti-fingerprint glass for the screen
- WiFi and Bluetooth interfaces
