

MTA

Black Hawk, a display for CASE

Shanghai, 24th November 2020. MTA, a multinational company, headquartered in Italy, known for the development and production of a wide range of electrical and electronic products for the main OEMs, announces during Bauma CHINA 2020 (Hall N1, Stand 553) the important supply to Case Construction Equipment of Black Hawk, a stand-alone display that equips the new B Series of CASE skid steer and compact track loaders.

Black Hawk is a modern 8" color TFT display complete with a six-button keypad at the bottom, which allows the user to quickly and intuitively monitor the machine's status and settings.

Black Hawk by MTA stands out for a series of sophisticated technical features specific to off-highway use, such as an optical bonding display treatment, whereby an anti-reflective glass pane is glued onto the screen with a technique that completely eliminates the intermediate air. In this way light reflection is minimized, allowing the operator to easily read the instrument even when exposed to direct sunlight.

Black Hawk is also characterized by an IP69k protection degree and by high resistance to vibrations and extreme temperatures, which are important features for the severe applications of the construction world.

The development of Black Hawk by the electronic division of MTA was conducted on the Android platform, a software environment that allows the creation of complex and refined graphics. This platform includes standard features that have allowed Case Construction Equipment technicians to develop dedicated Applications, customizing the software based on the application needs of the two ranges of loaders.

Black Hawk is just the latest in a series of electrical and electronic products developed by MTA for CNH Industrial, a global leader in the capital goods sector to which CASE belongs, further confirming the strong and lasting partnership that unites the two companies.
