

Sea Hawk by MTA

An 8" color display for CASE G Series wheel loaders

São Paulo, Brazil, June 5, 2018. MTA, a multinational company, headquartered in Italy, known for the development and production of a wide range of electromechanical and electronic products for major OEMs, is showcasing during the M&T Expo an 8" color display fitted on all the 7 models of the G-series wheel loaders, introduced on the market by CASE Construction Equipment.

The CASE Construction Equipment G Series wheel loaders offer operators a high level of control, providing them with the perfect operational environment to ensure maximum productivity. Hence the choice of the MTA Sea Hawk display that makes it possible to quickly and easily check the status and settings of the machine, being easy to read even when exposed to direct sunlight. If necessary, it can also act as a rearview monitor.

The Sea Hawk display was designed entirely by MTA's electronics division on an Android platform optimized for vehicular requirements, with safety features developed in accordance with ISO 25119. This Android platform, for the first time ever used for the development of an off-highway electronic product, includes standard features that have enabled the manufacturer to develop dedicated applications and thus be able to customize the software of the tool based on the specific requirements of these advanced machines.

MTA's Sea Hawk is distinguished by a number of sophisticated technical mechanisms specifically designed for off-highway conditions, such as the use of a protective lens with anti-reflective treatment glued to the display with special optical adhesives (Optical Bonding). By eliminating the layer of air between the two surfaces, this technology makes it possible to drastically reduce ambient light reflections, providing an optimal level of contrast for outdoor applications.

MTA's Sea Hawk also features an IP66 protection degree and high resistance to vibrations and temperatures, an important feature for such applications.

The supply of the Sea Hawk display is a further confirmation of the strong link between MTA and CNH Industrial, which over the years has led to the development and production of various electronic and electromechanical products, and which will, in the near future, also make use of its variants on other off-highway vehicles of the important Group.

MTA BRASIL

MTA Brasil, founded in 1995 in the industrial area of Arujá near São Paulo, is a strategic location supplying the important Mercosur market.

Constantly expanded to respond to producers who have established production facilities in the area, over the years MTA Brasil has aligned with the standards that distinguish the other sites of the company. Now it is certified IATF 16949, after having obtained the ISO 14001 environmental certification.

To support the production increase of these last years, the site has been equipped with a molding department with presses having a tonnage range from 80 to 300 tons.

MTA S.p.A. is a global leader in the development and production of a wide range of electromechanical and electronic products developed internally for the primary manufacturers of cars, motorcycles, tractors, and heavy vehicles. Founded in 1954, MTA has two production sites in Italy (Codogno and Rolo), eight foreign offices, sales of about €198 million, and 1,330 employees.
