

## A new dashboard for Tony V 8900 by Antonio Carraro

*Hannover, November 12<sup>th</sup>, 2023.* MTA, a multinational company operating in the global automotive sector through 3 divisions – Electric, Electronic and Power Electronic – announces during Agritechnica 2023 (Hall 17, Stand F41) the beginning of the collaboration with the Italian producer Antonio Carraro.

The first project linking MTA to Antonio Carraro, a company specializing in the production of tractors for agriculture, is the supply of a dashboard for the new Tony V 8900, an original specialized tractor whose superior technology makes it perfect for working in narrow rows.

Idea is a small (294 x 142 x 45,6 mm), very sturdy and IP66-rated dashboard, belonging to the wide range of off-the-shelf electronic customizable products proposed by MTA. Information from the tractor or any connected equipment is displayed via a 7" TFT beside which 18 LED warning lights are present, whose symbols and colors have been customized for Antonio Carraro through a dedicated screen printing.

Thanks to the user-friendliness of the MTA Studio® tool and the constant support of MTA's electronic technicians, Antonio Carraro implemented the basic software provided by MTA in order to adapt its features to the specific operational needs of the vehicle.

MTA designs and manufactures a complete range of high-performance customizable displays, dashboards and ECUs with different shapes and sizes. These products perfectly meet the ever-increasing demand of many OEMs needing customizable and cost-effective solutions for their machines.
