

MTA

A 24 V dashboard for Anadolu Isuzu

Atlanta (Usa), October 28th, 2019. MTA a multinational company, headquartered in Italy, known for the development and production of a wide range of electromechanical and electronic products for major OEMs, is announcing during the North American Commercial Vehicle Show (Hall B1, Stand 4045) the beginning of the collaboration with Anadolu Isuzu. The Turkish OEM has in fact decided to adopt the Revo Plus dashboard for its NPR10, NPR3D and TORA models, 3 trucks produced in Turkey for local and European markets and intended to be used for waste disposal.

Revo Plus is the off-the-shelf high-level dashboard belonging to the range of electronic products that can be customized by the OEMs through MTA Studio®, a quick and user-friendly software tool.

For Anadolu Isuzu trucks, Revo Plus has been adapted to 24 V to meet the heavy-duty requirements of these applications and stands out for its central 4.3" color TFT and 32 telltales. This feature has been crucial for Anadolu Isuzu's choice because it has allowed the displaying of different important information. First of all, the one related to the new Advanced Engineering Braking System (AEBS), now mandatory on trucks with more than 3.5 tons, together with other information coming for example from the brake system pressure monitoring, the rear-view camera and the diagnostic system.

Other important reasons why Anadolu Isuzu chose Revo Plus are the capability of the dashboard to work harmonically with the rest of the vehicle systems, given that the trucks were already in production, and the ability of the resident commercial and technical staff of MTA. In fact, they were able to support Anadolu Isuzu during all the development phases, until the start of production. Anadolu Isuzu was able to easily tailor the software according to its needs completing the job in less than one year.
