

New electromechanical unit for Dacia Duster

Shanghai, 16th April 2019. MTA, a multinational company headquartered in Italy, known for the development and production of a wide range of electromechanical and electronic products for major OEMs, showcases during Auto Shanghai (hall 5.2 stand 5BG123) a selection of its electromechanical units, including the one developed for Dacia Duster, which renews the long partnership between the company and Renault, active for more than 15 years.

The unit developed for Dacia Duster allows power distribution and the protection of services and it enables a better rationalization of loads and consequently a better layout in the engine compartment.

The unit, called BFT HJD (from the project's codename), is the first to be mass produced with clinched fuses of the MegaCompact (an MTA exclusive). These fuses allow the use of thinner wires for space and weight saving, in line with the needs of OEMs to meet increasingly stringent regulations related to CO₂ reduction.

BFT is mounted directly on the battery and is equipped with a horizontal battery terminal, also produced by MTA. Its cover is made with a Jump Start plug to allow easy access, in case the battery needs recharging.

The unit developed for Renault is part of a wide range of electromechanical units that MTA offers to major OEMs for applications ranging from cars to motorcycles and to heavy duty vehicles.

MTA China

MTA China was established in 2014 in order to pursue all opportunities offered by the global automotive market and particularly by China market where local and European OEMs have established large plants. The site is located in the Huaping Intelligent Manufacturing Park, Jinshan Industry Zone, Shanghai and is certified according to IATF 16949 and ISO 14001 for environmental certification. To support the steady production increase, the site will also be equipped with a molding department by the end of 2019.
